**Project Title:** NFS Most Wanted – Need for Security

---

**Project Domain:** AI-Driven OSINT (Open-Source Intelligence) and Cybersecurity Analysis System.

Name of the Company (for Industry Supported Project only):

---

Name of the External Guide (for Industry Supported Project only):

---

**INHOUSE PROJECT: YES**

**Abstract:**

NFS Most Wanted is a web-based platform designed to analyze an individual's online presence and create a detailed profile using web scraping, dorking, and reconnaissance techniques. Developed using React, web scraping libraries, and machine learning models, it identifies key features such as social media activity and online posts. This system enhances the understanding of online presence and provides structured analysis for security and research purposes.

**H/w & S/w Requirements:**

Frontend: ReactJS

Backend: Fast API, Web Scraping Libraries

Machine Learning: Python-based ML models

Development Tools: npm, Visual Studio Code

## High Level Design [Architecture diagram/block diagram]

Project Guide

Dr. Sharmishta Desai

Coordinator

Dr. Sarika Bobde
